

# Cisco Aironet 1552S Outdoor Access Point

## Outdoor Access Point for Wireless Sensor Networks

- Integrated ISA100 Wireless and WirelessHART compatible radio for wireless sensor networks
- Designed for hazardous environments (Certified Class I Div2/Zone2 enclosure)
- Compatible with the Honeywell OneWireless™ Solution
- Cisco CleanAir® technology provides integrated spectrum intelligence for a self-configuring and self-healing network
- Cisco® ClientLink technology improves reliability and coverage for legacy Wi-Fi clients
- Improved 802.11n range and performance with 2 x 3 multiple-input multiple-output (MIMO) technology
- Multiple IEEE radio support (802.11a/n, 802.11b/g/n)
- Diversity antenna support for 802.15.4 sensor radio
- Multiple uplink options (Gigabit Ethernet-10/100/1000 BaseT, fiber Small Form-Factor Pluggable (SFP) interface)

### Cisco Aironet 1552SA Outdoor Access Point

- 100-240 VAC power supply

### Cisco Aironet 1552SD Outdoor Access Point

- 19-30 VDC power supply

## High-Performance Outdoor Access Point for Wireless Sensor Networks

The Cisco® Aironet® 1552S Outdoor Access Point is a versatile model in the Cisco Aironet 1550 Series. The 1552S offers the capability of concurrently supporting ISA100 Wireless, WirelessHART, Wi-Fi and Ethernet devices on a single industrial wireless network. The 1552S merges the ruggedized outdoor [802.11n](#) access point with an integrated, ISA100 Wireless and WirelessHART-compliant radio to provide a seamless solution for wireless sensor networks. The 802.15.4 radio has been designated specifically for mission-critical wireless connectivity to industrial sensor equipment communicating using the ISA100 Wireless and/or WirelessHART standard. With an 802.15.4 radio integrated in an 802.11n-based access point, a single solution addresses the

growing need for wireless mobility while also providing mission-critical connectivity for industrial sensing and monitoring equipment, such as gauges for water treatment plants, sensors for chemical plants, and vibration monitoring solutions for oil rigs.

This allows customers to combine business use cases, such as:

- Monitoring a chemical treatment plant while providing onsite security via wireless video surveillance
- Monitoring the equipment and gauges on an oil rig while an onsite worker downloads schematics, blueprints, or work instructions to a handheld Wi-Fi tablet
- Providing real-time information to an onsite engineer about changes to processes and equipment so that abnormalities can be dealt with immediately

---

The Cisco Aironet 1552S Access Point is also Class I, Div 2/Zone 2 hazardous location certified. This means it is designed specifically for hazardous environments like oil and gas refineries, chemical plants, mining pits, and manufacturing facilities. The 1552S offers a single-box solution rather than requiring multiple separate wireless networks—one for 802.11n, one for an ISA100 Wireless sensor network and one for a WirelessHART sensor network.

By eliminating the extra power and network connections, which can be expensive to deploy in hazardous locations, the 1552S saves costs by reducing deployment times while offering a flexible, highly secure, and scalable mesh network for high-performance wireless coverage for both Wi-Fi clients and ISA100 Wireless or WirelessHART field instruments across large facilities. With all these benefits, the Cisco Aironet 1552S Outdoor Access Point can improve overall plant reliability, safety, and profitability.

The Cisco Aironet 1552S Outdoor Access Point supports multiple-device and multiple network application delivery methods, such as real-time seamless mobility, distributed control system connectivity, video surveillance, 3<sup>rd</sup> Generation (3G) and 4G data offload, and public and private Wi-Fi access. Designed to meet customer needs in a broad range of industries, the Cisco Aironet 1552S Outdoor Access Point offers the following additional benefits:

- **Flexible deployment options:** Access or mesh network or extension of an Ethernet network with 10/100/1000 Mbps Ethernet, fiber, or wireless backhaul options.
- **Cisco CleanAir<sup>®</sup> technology:** Integrated spectrum intelligence to detect, classify, and mitigate RF interference from unauthorized wireless bridges or malicious devices.
- **High-bandwidth video surveillance:** Video surveillance over Wi-Fi without the high cost of installing cables over long distances.
- **High-performance, multipurpose network:** Provides low capital and operational expenditures.
- **Integrated wired and wireless:** The Cisco Enterprises Network Architecture provides cost savings with end-to-end network access solutions that include wireless, switching, routing, and security.

### Flexible, High-Performance Mesh

The Cisco Aironet 1552S Outdoor Access Point offers a flexible, secure, and scalable mesh platform that is part of the [Cisco Unified Wireless Network](#). It offers high-performance mobility across large oil and gas facilities, chemical plants, manufacturing yards, and mining pits. The 1552S provides high-performance device access through improved radio sensitivity and range with 802.11a/b/g/n multiple-input multiple-output (MIMO) technology including two spatial streams. Multiple uplink and power options are available. The 802.3af-compliant, Power-over-Ethernet (PoE) interface makes it easy to connect IP devices, such as IP video cameras. The housing is certified for Class I, Div 2/Zone 2 deployment areas and provides a robust system that can withstand demanding, hazardous environments.

### Cisco CleanAir Technology

As part of the Cisco Aironet 1550 Series with Cisco CleanAir technology, the 1552S provides the highest-performance 802.11n connectivity for mission-critical outdoor networks by detecting interference from unauthorized devices, as well as common outdoor interference sources such as WiMAX networks and wireless bridging products. The 1550 Series uses chip-level intelligence to create a spectrum-aware, self-healing, and self-optimizing wireless network that mitigates the impact of wireless interference. Cisco CleanAir technology is a systemwide feature of the Cisco Unified Wireless Network that improves wireless network quality by detecting RF interference that other systems can't recognize, identifying the source, locating it, and then making automatic adjustments to optimize wireless coverage.

## RF Excellence

Building on the Cisco Aironet heritage of RF excellence, the Cisco Aironet 1550 Series delivers industry-leading performance for secure and reliable wireless connections. Industrial-grade parts, enterprise-class silicon-level intelligence, and optimized radios deliver a robust mobility experience. The Cisco Aironet 1550 Series provides a set of tools that deliver the robust, scalable wireless foundation required to realize the true potential of outdoor wireless mobility:

- [Cisco ClientLink technology](#) to raise the downlink performance to 802.11a/g clients, providing improved coverage and throughput to existing clients
- Radio resource management (RRM) for automated channel selection and power setting management of access points
- Advanced capabilities to select data rates, adjust power, and manage quality of service (QoS) for access points

## Centrally Managed Mesh Network

Central management and troubleshooting of the Cisco outdoor wireless access points prevent costly maintenance service calls to outdoor locations. The Cisco Prime Infrastructure works in conjunction with the Cisco Aironet Access Points and Cisco Wireless LAN Controllers to configure and manage the wireless networks. With Cisco Prime Infrastructure, network administrators have a single solution for RF prediction, policy provisioning, network optimization, troubleshooting, security monitoring, and wireless LAN systems management. Cisco CleanAir technology is integrated into Cisco Prime Infrastructure to provide real-time information on your outdoor network. Wireless network security is also a part of a unified wired and wireless solution. Cisco wireless network security offers the highest level of network security, which helps ensure that data remains private and secure and that the network is protected from unauthorized access.

## 802.11n Outdoor Access Point

The Cisco Aironet 1552S Outdoor Access Point contains a dual-radio system with radios that are compliant with IEEE 802.11a/n (5-GHz) and 802.11b/g/n (2.4-GHz) standards. The 1552S has three external antenna connections for three dual-band antennas. It has Ethernet and fiber Small Form-Factor Pluggable (SFP) backhaul options. This access point also has a PoE-out port and can power a video surveillance camera. A highly flexible model, the Cisco Aironet 1552S is designed for hazardous environments like oil and gas refineries, chemical plants, mining pits, and manufacturing factories. The Cisco Aironet 1552S Outdoor Access Point is Class I, Div 2/Zone 2 hazardous location certified. Lightning arrestors for surge protection are also supported.

## ISA100 Wireless and WirelessHART compliant Access Point

The Cisco Aironet 1552S Outdoor Access Point is a converged outdoor mesh network access point with an integrated 802.15.4 radio capable of communicating ISA100 Wireless and WirelessHART simultaneously. It enables the following concurrent radio operations:

- 2.4 GHz 802.11 b/g/n radio primarily for local Wi-Fi device access
- Configurable option for 5 GHz or 2.4 GHz 802.11 a/n radio for wireless mesh backhaul
- 2.4 GHz 802.15.4 radio for communicating simultaneously with
  - ISA100 Wireless field devices
  - WirelessHART field devices

The 802.15.4 radio can also receive secure configuration codes via an infrared (IR) receiver.

## External Antennas

The Cisco Aironet 1552S uses three Cisco AIR-ANT2547V-N-HZ antennas. These dual-band, omnidirectional, stick antennas have a gain of 4 dBi (2.4 GHz) and 7 dBi (5 GHz) and are also IP66 rated for robustness in corrosive environments.

The Cisco Aironet 1552S also uses two Cisco AIR-ANT2450V-N-HZ antennas for the 802.15.4 diversity radios. These 2.4-GHz band omnidirectional, stick antennas have a gain of 5 dBi and are IP66 rated.

## Product Specifications

Table 1 lists specifications for the Cisco Aironet 1552S Outdoor Access Point.

## Plan, Build, and Run Services for a Seamless Outdoor Experience

Professional services from Cisco and Cisco Advanced Wireless LAN Specialized Partners facilitate a smooth deployment of the next-generation wireless outdoor solution, while tightly integrating it with the wired and indoor wireless networks. Based on proven methodologies for planning and deploying end-to-end solutions with secure voice, video, and data technologies and years of experience designing and implementing some of the world's most complex, enterprise-class wireless networks, our specialists can help you optimize mobile connectivity to transform your business operations.

We work with your IT staff to see that your architecture, physical sites, and operational staff are ready to support Cisco's integrated, next-generation, outdoor wireless solution that combines the high performance of the 802.11n standard and Cisco CleanAir technology.

## Cisco Capital Financing Helps You Achieve Your Objectives

Cisco Capital<sup>®</sup> financing can help you acquire the technology you need to achieve your objectives and stay competitive. We can help you reduce capital expenditures (CapEx), accelerate your growth, and optimize your investment dollars and ROI. Cisco Capital financing gives you flexibility in acquiring hardware, software, services, and complementary third-party equipment. And there's just one predictable payment. Cisco Capital financing is available in more than 100 countries. [Learn more.](#)
